GAMESTUDIO · CONCEPT EXPLORATION

Operator Card Game — Concepts

What a one-operator Call of Duty card game could look like

Date	Author	Board task	Status
7 Nov 2026	**Sr Game Designer**	`op-concepts`	**For the head's review**

One operator per player. The cards improve and drive that one body on a map.

Call of Duty is named here only as a hypothetical licence and as inspiration. Every rule, name, number and visual in this document is original. No Call of Duty / Modern Warfare art, logos, trade dress, perk names or killstreak names are used. Weapon names reuse KillingCard's original ones (Kestrel AR-7, Wasp-9, Longreach .338, Bastion-60, P-12 Sidearm) plus one new one (Mako-12). Design only, no code.

EXECUTIVE SUMMARY

Six ways to play one operator

KillingCard deploys units into lanes. This exploration goes the other way: **one operator per player, and the cards improve and drive that one body on a map.** Six concepts with genuinely different structures; two are recommended for prototyping.

CONCEPT 1

Point Man

1v1 Hardpoint duel on a 3×3 room map. Your 24-card deck is generated from your loadout; a face-down Hold Angle shoots first.

Match	**10–12 min**
CoD feel	●●●●●
Mobile fit	●●●●○
Risk	**Med · balancing generated decks**

PROTOTYPE FIRST

CONCEPT 2

Fireteam

3v3 Domination, one operator per player (you plus bot allies). Secret plans revealed together, then lane-by-lane firefights.

Match	**8–10 min**
CoD feel	●●●●○
Mobile fit	●●●○○ **landscape**
Risk	**Med · 6-body readability**

FALLBACK: MAX KILLINGCARD REUSE

CONCEPT 3

Behind the Line

Solo roguelite campaign. A deckbuilder card-crawl against enemies that telegraph intent; your weapon levels up mid-run.

Match	**25–35 min run**
CoD feel	●●●○○
Mobile fit	●●●●●
Risk	**Low · proven genre**

LONG TERM: SOLO CAMPAIGN

CONCEPT 4

Tick Rate

Snake-draft your loadout, then a 1v1 deathmatch with no turns: a shared time track where every action costs ticks.

Match	**about 10 min**
CoD feel	●●●●○
Mobile fit	●●●○○
Risk	**High · track hard to read**

PARK

CONCEPT 5

Sightline

Map-control board game: players draft and place 9 map tiles, then fight Domination with an in-match Armory market.

Match	**20–40 min**
CoD feel	●●●●○
Mobile fit	●○○○○
Risk	**High · LOS AI, length**

PARK

CONCEPT 6

Snapshot

4-minute simultaneous-reveal Search and Destroy duel. Hold beats Rush, Rush beats Peek, Peek beats Hold.

Match	**4–6 min**
CoD feel	●●●●○
Mobile fit	●●●●●
Risk	**Med · can feel like coin-flips**

PROTOTYPE SECOND

Recommendation: prototype two

1. **Point Man, the flagship.** A 1v1 Hardpoint duel on a 3×3 room map, and **your deck is generated from your loadout**: weapons give Fire cards, attachments edit those cards, perks are passive slots and killstreaks sit in a tray. This makes the gunsmith-and-unlock loop the deckbuilding itself, so "I unlocked a foregrip" directly means "my deck changed".
2. **Snapshot, the cheap second.** A 4-minute simultaneous-reveal Search and Destroy duel ("who pre-aimed the angle?"). It is the purest translation of fast time-to-kill and reads, it is phone-portrait native, and it shares Point Man's weapon table and loadout data. It could ship later as Point Man's quick mode.

Four decisions are needed from the studio head (§11): which concepts to prototype, who the first opponent is, how much is hidden on the map, and which screen to design first. Recommended answers are marked.

THE HEAD'S BRIEF (VERBATIM)

"We need to find what a Call of Duty card game would look like, considering that in Call of Duty you only play one character at a time and equip two weapons and perks and stuff, so not spawning units but improving our own character and fighting on a map or something."

ABOUT THIS DOCUMENT

Board task `op-concepts` · project `opcard` · Sr Game Designer · 2026-11-07 · Status: **for the head's review** · design only, no code.

Shorthand: HP = Health, **T** = Tempo (action points), **C/M/L** = Close/Mid/Long.

Source: `studio/concepts/operator-card-game/concepts.md` . This print edition reorders the source (pillars before the stat model) and renumbers its sections; the rules and numbers are unchanged. Diagrams are drawn from the written rules; where a rule leaves layout open, the drawing is marked illustrative.

Studio UX rule (all concepts). Every card, slot, room, sightline and token has a zoomed inspect view on **right-click (desktop) and long-press (touch)**. Each concept's board was sized so that this works on a phone.

SECTION 1

What makes a CoD match feel like CoD

1.1 Seven design pillars

1 One body, many lives.

You *are* one operator. Your body is your only piece, so every risk is personal. Death is brief (you are back in seconds), so you play boldly rather than freezing.

CARD TEST the player never controls more than one figure, and dying costs tempo, never the match.

2 First to see, first to shoot.

Time-to-kill is short. The fight is decided before it starts, by who held the angle, who had the better range and who acted first.

CARD TEST most exchanges resolve in one or two shots (Health 4, damage 1 to 4). There are no long health-bar slugfests.

3 Position is power.

Sightlines, cover, power positions, flanks and spawn logic matter. Where you stand changes what your gun is worth: an SMG in a room versus a sniper down a lane.

CARD TEST the same card is good or bad depending on the map square you play it from.

4 The loadout is your identity.

Before the match you make a personal, expressive build (primary, secondary, equipment, perks, field upgrade, streaks), and it shapes how you want to play.

CARD TEST two players with the same rank and different loadouts face different decisions every turn.

5 The streak is the tension.

Kills without dying escalate your power. Each life asks you to play safe and protect the streak, or push for the next reward.

CARD TEST a visible streak meter, three chosen rewards, and a reset on death.

6 The objective drags you out of hiding.

Score-to-win modes (Team Deathmatch, Domination, Hardpoint, Search and Destroy) punish camping and force fights in known places.

CARD TEST the score comes mainly from map spaces, so standing still loses.

7 Every match moves a bar.

Weapon XP, attachment unlocks, camo challenges and calling cards mean even a loss feels like progress, and “one more match” is always close.

CARD TEST every match awards XP to the weapon you used and progress on at least one visible challenge.

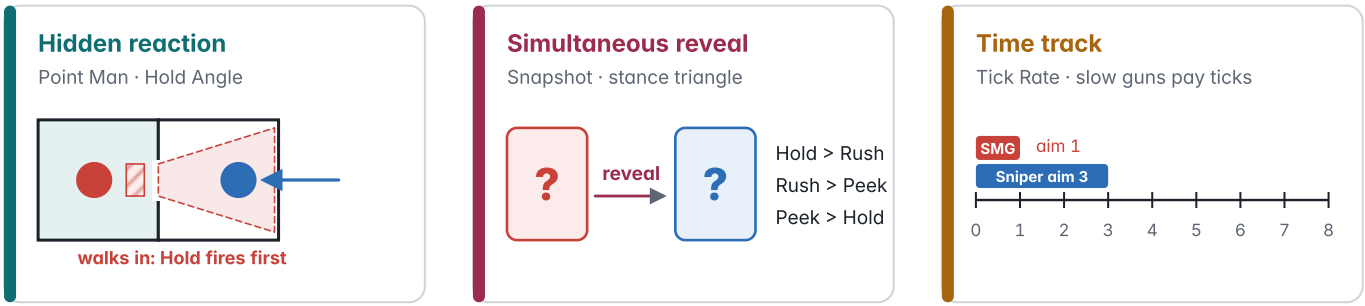

+ Loud and readable feedback.

Eighth, flavour pillar, applied everywhere rather than designed. Hit markers, a kill feed and a streak call-in moment. KillingCard already has these as FX (§10).

1.2 What translates poorly to cards, and how to fake it

Doesn’t translate	Why	How we fake it
Aim and reflexes	Cards have no aim skill.	Replace aim with **reads and initiative**: hidden “Hold Angle” reactions (Point Man), simultaneous reveal with a stance triangle (Snapshot), or a time track where slow guns pay ticks (Tick Rate). Skill becomes predicting the opponent, the card-game equivalent of pre-aiming.
Real time / simultaneity	Alternating turns let the defender react, which turns a 0.3-second fight into a polite exchange.	Use reaction windows (overwatch), simultaneous reveal, or a time track. Never use “I shoot, you shoot back, I shoot”.
Fast time-to-kill vs card-game health pools	Card games like 20–30 HP.	Health 4 and damage 1–4. Use cover and plates as the only buffers.
Fog of war, footsteps, minimap	A board is fully visible.	Hidden position cards, “Noise” (sprinting reveals you), and recon killstreaks that reveal hidden information. Concepts differ on how much is hidden (Q3).
6v6 chaos and respawn churn	Too many bodies to track on a phone.	Use 1v1 or 3v3 at most. Respawn becomes a **fresh hand** plus a tempo penalty (the respawn timer).

Doesn't translate	Why	How we fake it
Fluid movement (slide, mantle, jump)	Grids are clunky.	Use small node or room graphs. Movement cards (Slide, Mantle, Sprint) carry the verbs as small bonuses.
Recoil, attachments as feel	Attachments are about feel, not numbers.	Each attachment is a **trade-off on a card**: +1 Long but Handling +1, or +2 Fire cards but −1 Close. The player feels the gunsmith as deck texture.
Spawn trapping, camping	These degenerate into stalemates.	Rotating objectives (Hardpoint), spawns placed far from the enemy, and grenades that ignore cover.

Three ways the concepts replace aim. Each turns "who pre-aimed?" into a read on the opponent rather than a reflex.

SECTION 2

A shared stat model

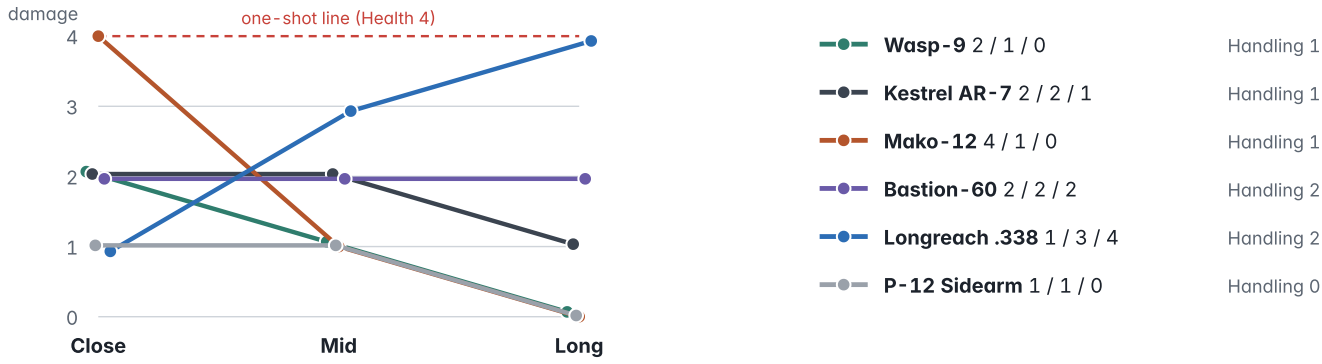

All six concepts use one weapon model, so whichever one wins, the data carries over.

Operator Health: 4 ●●●●
Most guns down a target in 2 hits at their best range. That is the "fast time-to-kill" dial.

Cover removes 1 damage at Mid and Long, never at Close. Close fights are decided by who is faster and who is closer, not by cover.

WEAPON TABLE (ORIGINAL NAMES)

Weapon	Class	Close	Mid	Long	Handling (cost to fire)	Identity
Wasp-9	SMG	**2**	**1**	**0**	**1** (fast)	Wins rooms, loses lanes
Kestrel AR-7	Assault rifle	**2**	**2**	**1**	**1**	Generalist
Mako-12	Shotgun	**4**	**1**	**0**	**1**	One-shot in the room, useless outside it
Bastion-60	LMG	**2**	**2**	**2**	**2** (slow)	Holds an angle, suppresses
Longreach .338	Sniper	**1**	**3**	**4**	**2** (slow)	One-shot at range, punished up close
P-12 Sidearm	Pistol (secondary)	**1**	**1**	**0**	**0**	Free emergency shot ("switch to pistol")

Damage by range. Each weapon's Close / Mid / Long damage against Health 4 (dashed line = one-shot). Handling (cost to fire) is listed beside each weapon.

LOADOUT SLOTS (THE COD SHAPE, WITH ORIGINAL CONTENTS)

PRIMARY	SECONDARY	LETHAL	TACTICAL	PERK 1	PERK 2	PERK 3	FIELD UPGRADE	STREAKS ×3
Weapon	**Weapon**	Frag, Tripwire	Flashbang, Smoke	list 1	list 2	list 3	charges over time	earned by streak points

3 Perks are one from each of three lists. The 3 Killstreaks are earned by streak points without dying; the streak resets on death.

Example perks
Soft Step (quiet movement), *Scrounger* (refill on a kill), *Cool Head* (later streaks cost 1 less), *Low Profile* (immune to recon), *Long Breath* (holding an angle is cheaper), *Thick Plates* (Health 5).

Example field upgrades
Deployable Cover, *Rally Beacon* (a personal respawn point), *Adrenal Shot* (heal to full), *Signal Jammer*.

Example killstreaks
Recon Drone, *Sentry Turret*, *Mortar Barrage*, *Attack Helo*. These are KillingCard's existing generic names.

1
OF 6

SECTION 3 · CONCEPT 1

Point Man

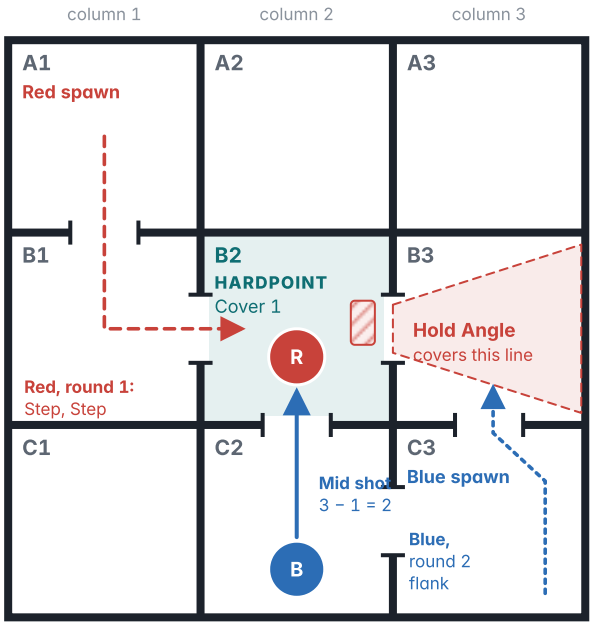

1v1 Hardpoint duel; your deck is your loadout

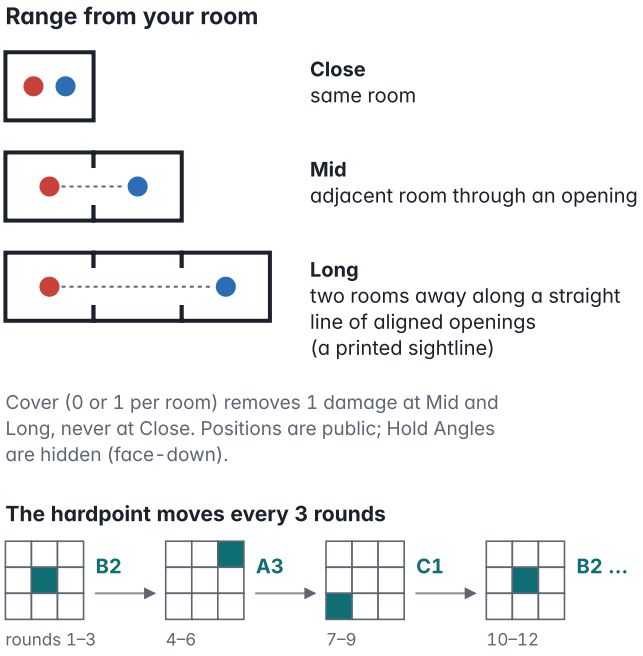

PLAYERS	MODE	WIN	MATCH	BEST SCREEN
1v1	Hardpoint	First to 8 points	About 10–12 min	Phone portrait: good

Pitch. Two operators fight over a rotating hardpoint on a 3×3 grid of rooms. Before the match you build a loadout, and **the loadout generates your 24-card deck.** Your primary contributes its Fire cards, your attachments edit them (more cards, better range, cheaper to fire), equipment adds a few utility cards, perks sit in three passive slots, and killstreaks wait in a tray until your streak points earn them. When you go down you lose your hand and respawn with a fresh one, so respawning feels like coming back in with a new plan. The skill is in positioning (which room, which sightline) and in **Hold Angle**: a face-down Fire card that shoots first when the enemy walks into your line. That is the "they pre-aimed me" moment.

THE MAP

9 rooms (A1–C3) with walls, doorways, windows (Mantle only) and some roofed rooms. **Range:** same room = Close; an adjacent room through an opening = Mid; two rooms away along a straight line of aligned openings (a printed sightline) = Long. Rooms have Cover 0 or 1. Each side has 2 spawn rooms in opposite corners. You respawn in the one farther from the enemy. Maps are hand-made (target 4 at launch). Positions are public; **Hold Angles are hidden**.

Point Man board, as in the worked example. Red holds the hardpoint B2 (Cover 1) with a face-down Hold Angle on the B2–B3 doorway; Blue shoots from C2 at Mid. Illustrative layout: only the openings the example uses are drawn; real maps are hand-made with their own walls, windows (Mantle only) and roofed rooms.

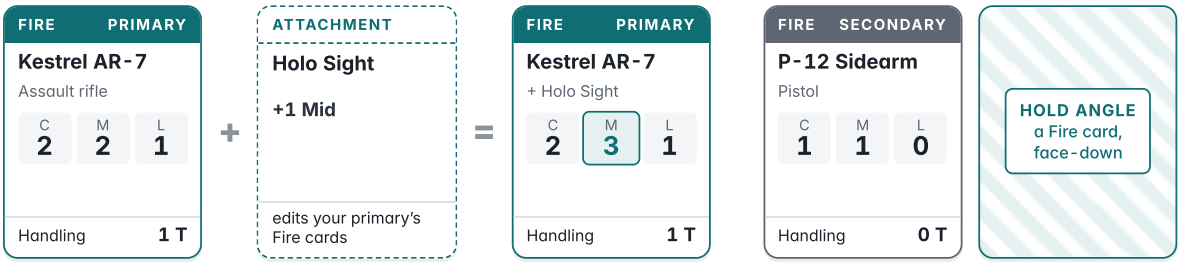

HOW THE DECK IS BUILT: NO FREE DECKBUILDING, THE GUNSMITH IS THE DECKBUILDER

Primary Kestrel AR-7 shown	■■■■■■■■	**8 Fire cards** (SMG 9, Sniper 6, Shotgun 6). Each shows the gun's C/M/L damage and Handling.
Secondary P-12 Sidearm	■■■	**3 Fire cards** (Pistol: Handling 0).
Lethal e.g. Frag	■■	**2 cards**
Tactical e.g. Smoke	■■	**2 cards**
Movement fixed, everyone	■■■■■■	**6 cards:** 2 Sprint, 2 Slide, 1 Mantle, 1 Hold Angle
Attachments up to 5, like a gunsmith	▢▢▢	Each **edits** the deck with a trade-off; some add cards (**+0 to 3**).

Total: 8 + 3 + 2 + 2 + 6 = **21**, +0 to 3 from attachments, so **about 22–24 cards**.

Movement cards. Sprint: move 2 rooms. Slide: move 1; your next Close Fire this turn gets +1. Mantle: cross a window edge. Hold Angle: also playable from any Fire card (see the turn).

AN ATTACHMENT EDITS A FIRE CARD

Mock cards. The Red loadout from the worked example: Kestrel AR-7 + Holo Sight (C2 / M3 / L1, Handling 1). Card frames and art direction are placeholders.

Extended Mag +2 Fire cards; Handling +1 on the first Fire each turn	**Foregrip** +1 Mid; −1 Close	**Holo Sight** +1 Mid
Long Barrel +1 Long; Handling +1	**Quick Stock** Handling −1 (minimum 0); −1 Long	**Suppressor** your Fire does not trigger enemy Hold Angles; −1 Long

ON THE BOARD, NOT IN THE DECK

PERKS · 3 PASSIVE SLOTS
e.g. **Soft Step** (your first Step each turn is free), **Scrounger** (draw 2 on a kill), **Long Breath** (Hold Angle costs 0 T)

FIELD UPGRADE · BOARD SLOT
Charges 1 per turn, usable at 4. ▢▢▢▢
Deployable Cover, Rally Beacon or Adrenal Shot.

KILLSTREAK TRAY · PICK 3 OF 4 · COSTS IN STREAK POINTS

Recon Drone · 3 — see the enemy's hand and face-down Hold Angles for their next turn

Mortar Barrage · 6 — 3 damage to everyone in a room, 1 in adjacent rooms, ignores cover

Sentry Turret · 4 — a 1-damage turret in your room that shoots enemies who enter it or end their turn within Mid sightline

Attack Helo · 8 — 1 damage to the enemy at the start of each of their next 3 turns unless they are in a roofed room

HOW A TURN WORKS

1 Draw & gain T	Draw up to 5. Gain 3 T (2 T on the turn you respawn).
2 Spend T	Spend T on any mix of: **Step** (1 T: move 1 room through an opening), movement cards, **Fire** (cost = Handling; damage by range, minus cover), equipment (1 T), killstreaks from the tray (0 T), and the field upgrade (0 T when charged).
3 Hold Angle (1 T)	Put any Fire card face-down on one sightline or doorway from your room. Until your next turn, the first time the enemy moves into, or fires along, that line, you **immediately resolve that Fire first**, before their action. Then the card is discarded.
4 End of turn	If you are on the hardpoint and the enemy is not, **+1 point** and +1 streak point.

5 Downed	You lose your hand and your streak points. You respawn at the start of your next turn (that is the respawn penalty). The enemy gets +2 streak points.

WIN

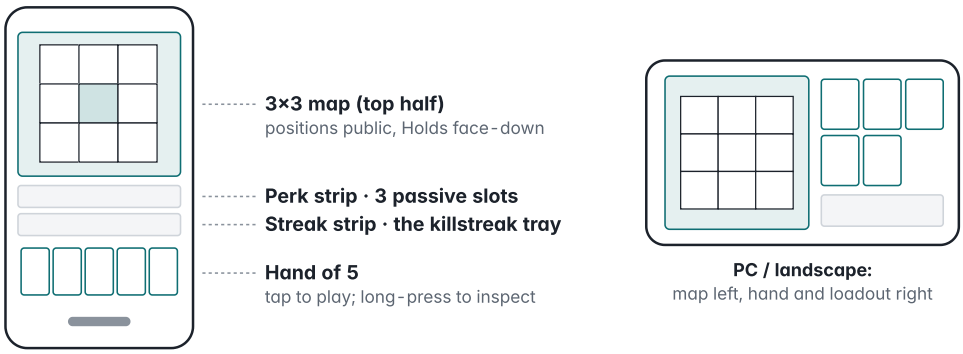

The first to **8 points** wins. The hardpoint moves every 3 rounds (B2, then A3, then C1, then B2…). There is a cap of 14 rounds; at the cap the leader wins, and a tie goes to sudden death on B2. **Match length: about 10–12 minutes** (one turn is about 25–40 seconds).

PLATFORM FIT

Phone portrait: good. The 3×3 map sits on the top half, the hand of 5 at the bottom, with the perk and streak strips between them. PC and landscape: map on the left, hand and loadout on the right. Async PvP is possible because turns are discrete.

META PROGRESSION

Each weapon has its own XP (gained per Fire card played, and doubled on kills) and levels 1–20 that unlock attachments. That is the core pull, because each unlock changes the deck. Operator level unlocks perks, equipment and killstreaks. **Camos** come from per-weapon challenges ("10 Long downs with the Longreach") and change the card art finish only. **Calling cards** are earned for feats (a 3-kill streak, a perfect hill) and appear as your banner on the match intro. Cosmetics never change gameplay.

Phone portrait layout as described: map on the top half, perk and streak strips between, hand of 5 at the bottom. Wireframe only.

3-TURN WORKED EXAMPLE

Red Kestrel AR-7 + Holo Sight (C2 / **M3** / L1, Handling 1). Blue Longreach .338 (C1 / M3 / L4, Handling 2). The hill is **B2 (Cover 1)**. Red spawned at A1, Blue at C3.

Turn	Who	What happens	State after
Round 1	Red 3 T	Step A1→B1 (1), Step B1→B2 (1). Red then sets **Hold Angle** with a Fire card on the B2–B3 doorway (1). Turn end: Red is alone on the hill, so **Red 1 point**, streak 1.	Red HP 4 · Blue HP 4 Points 1–0 · Red streak 1
Round 1	Blue 3 T	Step C3→C2 (1). C2 sees B2 through an opening, so the range is Mid (Red's Hold covers B3, not C2). Blue fires the Longreach at Mid (2 T): 3 damage − 1 cover = **2**.	**Red HP 4→2** Points 1–0
Round 2	Red 3 T	Fire at C2 at Mid (1 T): 3 damage, cover 0, **Blue HP 4→1**. Fire again (1): **Blue downed.** Red gets +2 streak, reaching 3, so the **Recon Drone enters the tray**. With the last 1 T Red sets a **new Hold Angle** on the B2–B3 doorway (the round-1 Hold expired at the start of this turn). Turn end: **Red 2 points**, streak 4.	**Blue downed** Points 2–0 · Red streak 4 Recon Drone in tray
Round 2	Blue respawns, 2 T, fresh hand	Blue respawns at C3 and tries to flank: Step C3→B3 (1). That walks into **Red's Hold Angle**, which fires first: Mid, 3 damage, cover 0, **Blue HP 4→1.** With 1 T left Blue cannot fire the Longreach (Handling 2), so Blue fires the **P-12 Sidearm** (0 T): Mid, 1 damage − 1 cover, **0 damage**. The pistol bounces off Red's cover.	**Blue HP 4→1** Red HP 2
Round 3	Red	Fire at B3 (1 T): **Blue downed** again. Red's streak is 6. Red is 2–0 on points and two kills up.	**Blue downed** Points 2–0 · Red streak 6

Lesson the example teaches: Blue should have used Smoke on the B2–B3 line, or gone through C2 again where the Hold wasn't. Reading the hidden Hold is the skill.

2
OF 6

SECTION 4 · CONCEPT 2

Fireteam

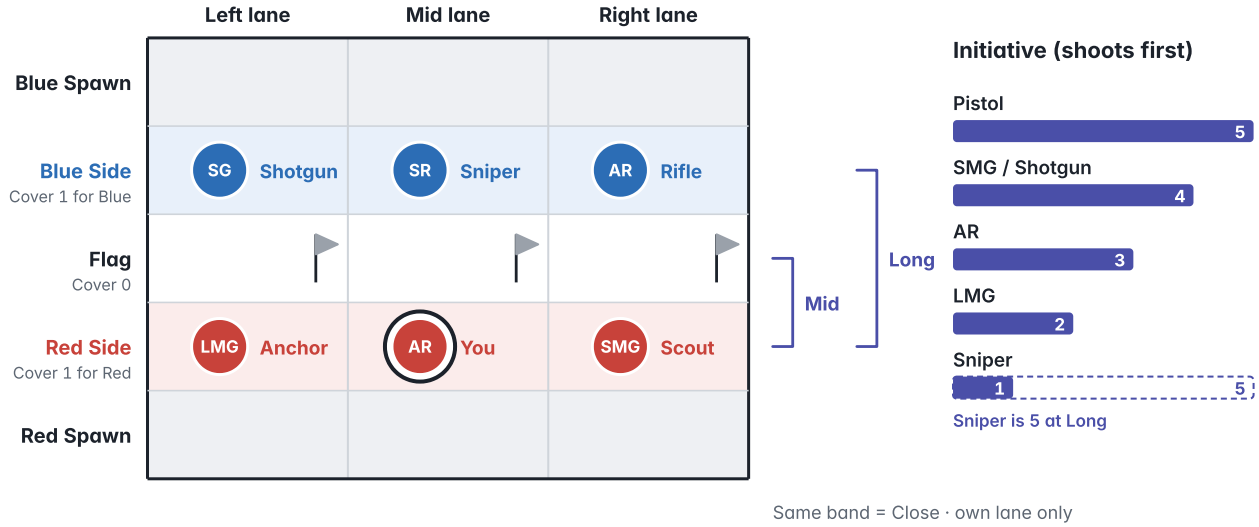

3v3 Domination, one operator per player

PLAYERS	MODE	WIN	MATCH	BEST SCREEN
3v3 (humans or bots)	Domination	First to 12 points	About 8–10 min	Landscape-first

> **Pitch.** Two fireteams of three. Every player (a human, or a bot ally with a personality) runs exactly **one** operator. The map is 3 lanes × 5 depth bands, with a Domination flag in the middle of each lane. Each round all six operators plan in secret: where to move, and which **kit tile** to use. The plans are revealed together, then each lane's firefight resolves in a readable order (KillingCard's beat system). Team roles come from loadouts: the SMG entry player, the LMG anchor, the sniper on the long lane. Solo play is you plus 2 bot allies against 3 bots. Co-op is 3 humans against AI. Full 3v3 PvP comes later.

THE MAP

Lanes Left / Mid / Right. Bands from your side: **Spawn, Side, Flag, their Side, their Spawn**. Range: same band = Close, 1 band apart = Mid, 2 bands apart = Long, and you can only shoot within your own lane. Your own Side band gives you Cover 1. The Flag band has Cover 0. Each map card (there are 5) changes 1–2 cells: "Mid Flag has Cover 1", "Right lane Long sightline blocked".

Fireteam board with the worked example's round-1 positions. Ranges are counted in bands within one lane. Right: the Initiative order that decides who shoots first in each lane.

LOADOUT BECOMES A KIT BOARD (NO DECK)

Each operator has 4 **kit tiles**: two universal and two set by the primary. A used tile is on cooldown for one round. Lethal and tactical have 1 charge per life. Perks are passive. The field upgrade charges over 3 rounds. Killstreaks are per operator (2 / 3 / 5 kills without dying), and their effects help the team (a Recon Drone reveals the enemy's planned lanes before your next lock-in).

KIT ALL	KIT ALL	KIT SMG	KIT LMG	KIT SNIPER	KIT AR
Push	**Hold**	**Flank**	**Suppress**	**Scope**	**Burst**
Move 2 bands, −1 Initiative	+1 damage to any enemy that enters your range this round	Shifts lane and still lets you shoot, ignoring cover	Target gets −1 damage and −2 Initiative	+1 Long damage if you didn't move	A second shot at −1 damage

Solid: the two universal tiles every operator has. Dashed: primary-set tiles; the source gives one example per primary (it says two are set by the primary).

HOW A ROUND WORKS

1 Plan (secret, 30 s online)	Each operator chooses a move (stay, advance or fall back 1 band, or shift lane within your Side or Spawn band) and at most one kit tile or equipment. Humans can ping lanes to bots.

2	**Reveal**	Movement resolves, then smoke and flashes.
3	**Firefights, lane by lane, Left to Right**	Within a lane, the highest **Initiative** shoots first (Pistol 5, SMG/Shotgun 4, AR 3, LMG 2, Sniper 1, but Sniper is 5 at Long). Each operator fires once at the nearest enemy in range. A downed operator doesn't fire.
4	**Flags**	A lane's flag flips to a team that has operators in the Flag band while the other team has none.
5	**Score**	+1 per flag you hold. Downed operators respawn at their Spawn band next round, in any lane.

WIN

The first team to **12 points**, with a cap of 12 rounds. **Match length: about 8–10 minutes.**

META PROGRESSION

As in Point Man (weapon XP, attachments that upgrade kit tiles, camos, calling cards), plus **bot ally unlocks** with personalities (KillingCard's AiPersonality weights).

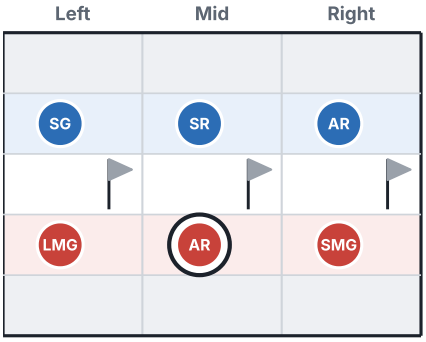

PLATFORM FIT

Landscape-first (phone landscape, tablet, PC): three lanes side by side is KillingCard's column board. Phone portrait is cramped (6 operators plus flags), but it works if the lanes stack vertically.

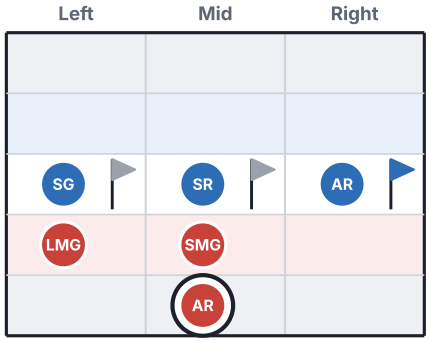

3-TURN WORKED EXAMPLE

Red **You** (Kestrel AR-7), Anchor bot (Bastion-60), Scout bot (Wasp-9). Blue AI a sniper (Longreach), a shotgunner (Mako-12) and a rifleman (Kestrel). Everyone starts in their Spawn band. Lanes: You Mid, Anchor Left, Scout Right. Blue: sniper Mid, shotgun Left, rifle Right.

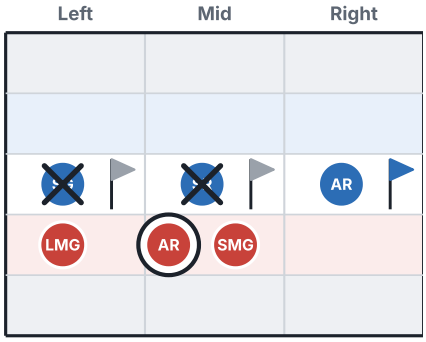

Round 1 · 0–0

Round 2 · 0–1

Round 3 · 0–2

Positions during each round's firefight (top band: Blue Spawn; bottom band: Red Spawn). AR = Kestrel AR-7, LMG = Bastion-60, SMG = Wasp-9, SR = Longreach .338, SG = Mako-12. The ringed token is You. A cross marks an operator downed that round.

Round	What happens	Score
Round 1	Everyone advances to their Side band, which is 2 bands apart, so Long range. **Mid:** the Blue sniper used **Scope** but moved, so no bonus. Long Initiative: sniper 5 against your 3. The sniper fires first: Long 4 − 1 cover = **3**, **You 4→1**. You fire back: Long 1 − 1 = 0. **Left:** Anchor LMG at Long, 2 − 1 = **1** on the shotgunner (4→3). The shotgun deals 0 at Long. **Right:** both at Long, Wasp 0 and Kestrel 1 − 1 = 0.	**0–0**
Round 2	You **fall back** to Spawn, out of the sniper's range (3 bands). The Anchor uses **Suppress** on the shotgunner, who advances to Left Flag. Left is now Mid range: the shotgun deals 1 − 1 (suppressed) = 0, and the LMG deals 2 to the shotgunner (3→1). The Blue sniper advances to **Mid Flag** to chase you, but you are 3 bands away, out of range. The Scout uses **Flank** (Right Side→Mid Side): it shifts into your lane and still shoots. Side to Flag = Mid. The Scout has Initiative 4 and fires first, 1 damage: **sniper 4→3**. The sniper answers at Mid, 3 − 1 cover = 2: **Scout 4→2**. Blue's rifle advances to Right Flag uncontested and **captures Right**.	**0–1**
Round 3	You advance to Mid Side. In Mid lane the order is Scout (Initiative 4), You (3), sniper (1). The Scout hits for 1 (3→2) and you hit at Mid for 2: **sniper downed before it fires** (your kill: streak 1). The Anchor finishes the shotgunner (1→0) and **advances to Left Flag next round**. Blue still holds Right. Red now has a 3v1 window. A Recon Drone at 2 kills is one more down away.	**0–2**

Reading note. In round 2 the source says the sniper at Mid Flag is "3 bands away" from You at Red Spawn. By the band order (Spawn, Side, Flag…) that gap is 2 bands, as the diagram shows; the source wording is kept.

3
OF 6

SECTION 5 · CONCEPT 3

Behind the Line

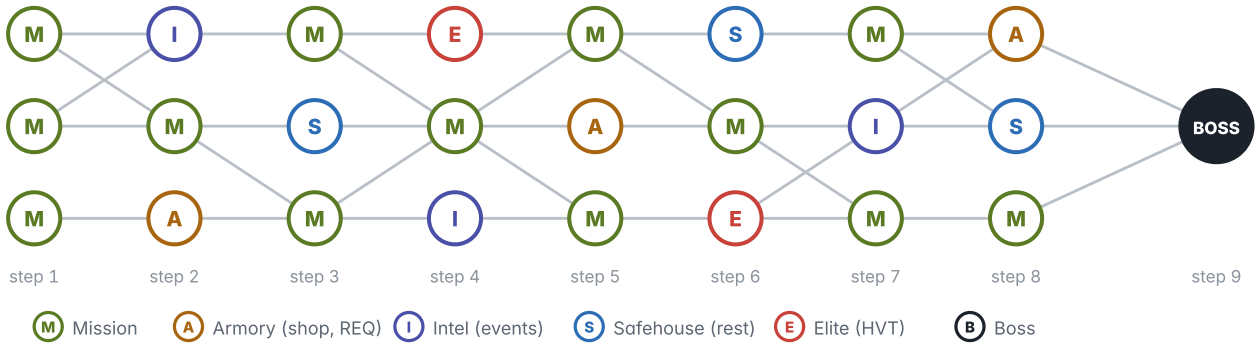

Roguelite single-operator campaign (PvE)

PLAYERS	MODE	WIN	LENGTH	BEST SCREEN
Solo, offline	Three-act campaign run	Beat the act-3 boss	Run 25–35 min · fight 2–3	Phone portrait: excellent

Pitch. A solo run. You take one operator through a three-act campaign map of missions, safehouses, armories and intel events, ending in a commander boss. Combat is a card-crawl: each encounter is a short line of enemy cards that **telegraph their intent** ("aiming at you: 2 damage next turn"), and you choose between three positions (Left cover, Centre, Right flank) that change who can see you. Your deck is a classic deckbuilder of actions. **Your weapon levels up mid-run**, and each level offers 3 attachments. **Clean streaks** (kills without taking Health damage) earn killstreaks inside a mission. This is where the "one more run" collection loop lives.

THE MAP: TWO LAYERS

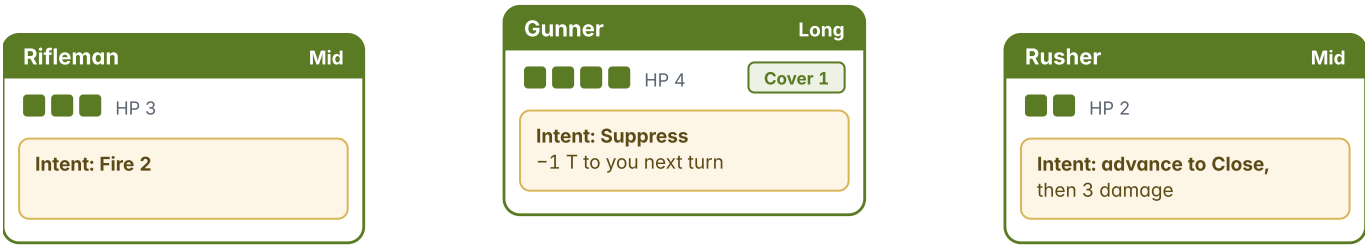

The **run map** is KillingCard Run v2's map unchanged in structure: 9 steps, 3 paths, forks into Armory (shop, currency REQ), Intel (events), Safehouse (rest), Elite (HVT) and Boss. The **encounter** is a 3-room mission (two fights and an exfil fight). Each fight has your 3 positions against 1–4 enemy cards at Close, Mid or Long, some with cover. An enemy has a sightline to you unless your position is behind cover from its side (Left cover blocks enemies on the right flank, and so on).

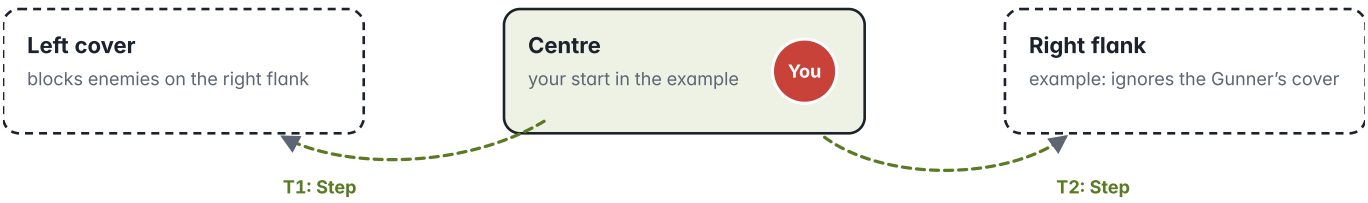

Run map structure (9 steps, 3 paths, forks). Node placement here is illustrative; the source reuses Run v2's structure without fixing a layout. Each Mission node is a 3-room mission: fight, fight, exfil fight.

AN ENCOUNTER: ENEMY INTENT AND YOUR THREE POSITIONS

ENEMY LINE · acts left to right, as telegraphed

YOUR THREE POSITIONS · Step: 1 T to move one position

Left cover blocks enemies on the right flank, and so on. Damage hits Plates first, then HP.

The worked example's fight, "Courtyard". Enemy cards show HP, range, cover and their telegraphed intent; they act left to right (shown in the order the example lists them). You start at Centre.

LOADOUT → CARDS AND SLOTS

You start with **Primary + Secondary on the board** (their stats from §2) and a **10-card starter deck**. Perks are **relics** found at elites and Armories (3 slots; you may swap). The Field Upgrade is a per-mission charge. Killstreaks: choose 3 at the run start, earned by clean-streak points within a mission. **Weapon XP** (from kills) levels the gun: each level offers 3 attachments, pick 1, maximum 5. A second primary found mid-run can be swapped in, and your Fire cards adopt the new gun's stats, which is exactly CoD's "pick up a weapon".

Fire ×5 uses the equipped weapon	■■■■■	cost = Handling, at a target in sightline
Step ×2 change position	■■	1 T, move one position
Frag · Plate · Reload/Draw 1 each	■■■	Plate: +2 armor

Health: HP 6 + up to 4 Plates ●●●●●●▢▢⬚⬚ · **3 respawn tickets** per run.

HOW A TURN WORKS

1	**Draw & read intents**	Draw 5, gain 3 T. Enemy intents are visible.
2	**Play cards**	Fire (cost = Handling) at a target in sightline, Step (1 T, move one position), equipment, Plate.
3	**Enemies act**	In order, left to right, as telegraphed. Damage hits Plates first, then HP.
4	**Clean streak**	+1 per kill. It halves when you lose HP (Plates soak damage without breaking it).
5	**Health & tickets**	HP 6 + up to 4 Plates. Going down costs one of 3 **respawn tickets**: you restart the fight with a fresh hand at full HP, and the streak is lost. At 0 tickets the run ends.

WIN

Beat the act-3 commander boss (each boss has one unique rule, like KillingCard Run v2's bosses). A **run takes about 25–35 minutes**; a single fight takes 2–3 minutes.

META PROGRESSION

The strongest of the six. Runs unlock new weapons, attachments, perks and killstreaks into the pools. There are operators with a passive and a once-per-run ability (Run v2's Operators), camos from challenges, calling cards for boss kills and modifiers, and Threat levels (Hardcore and so on).

PLATFORM FIT

Phone portrait: excellent (Slay the Spire-like layout: enemy line on top, you in the middle, hand at the bottom). PC is fine. Offline.

3-TURN WORKED EXAMPLE

You: Kestrel AR-7 (C2 / M2 / L1), HP 6, Plates 2. Fight "Courtyard": a Rifleman (HP 3, Mid, intent: Fire 2), a Gunner (HP 4, Long, Cover 1, intent: Suppress, −1 T to you next turn) and a Rusher (HP 2, Mid, intent: advance to Close, then 3 damage). You stand at Centre.

Turn	What happens	State after
Turn 1 3 T · Fire, Fire, Step, Frag, Plate	Frag the Rusher (1 T, 2 damage): **Rusher downed** (streak 1). Fire at the Rifleman (1 T, Mid 2): HP 3→1. Step to **Left cover** (1 T). Enemies act: the Rifleman fires 2, −1 cover = 1, so **Plates 2→1** (the streak holds). The Gunner suppresses: next turn you get 2 T.	You: HP 6 · Plates 1 · Left cover Rifleman HP 1 · Gunner HP 4 Streak 1
Turn 2 2 T	Fire at the Rifleman: **downed** (streak 2, so the **Recon Drone is earned**). Step to **Right flank** (1 T); the flank ignores the Gunner's cover. The Gunner's intent is "Reposition", so it doesn't shoot.	You: Right flank Gunner HP 4 Streak 2 · Recon Drone
Turn 3 3 T	Recon Drone (0 T): it marks the Gunner, and your next 2 Fires get +1. Fire at Long: 1 + 1 = 2 (no cover from the flank), Gunner 4→2. Fire again: **Gunner downed** (streak 3). **The fight is clean.** Weapon XP is +3, so the Kestrel reaches level 2. Offer: Foregrip / Holo Sight / Extended Mag.	All enemies down · clean Streak 3 · Kestrel level 2

4
OF 6

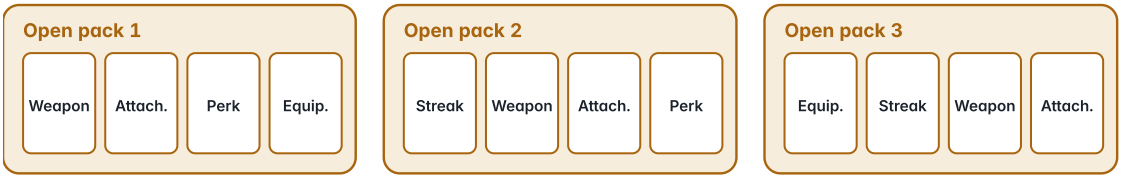

SECTION 6 · CONCEPT 4

Tick Rate

Draft your loadout, then fight on a time track

PLAYERS	MODE	WIN	MATCH	BEST SCREEN
1v1 arena	Draft, then Team Deathmatch	First to 5 downs	About 10 min incl. draft	PC / landscape

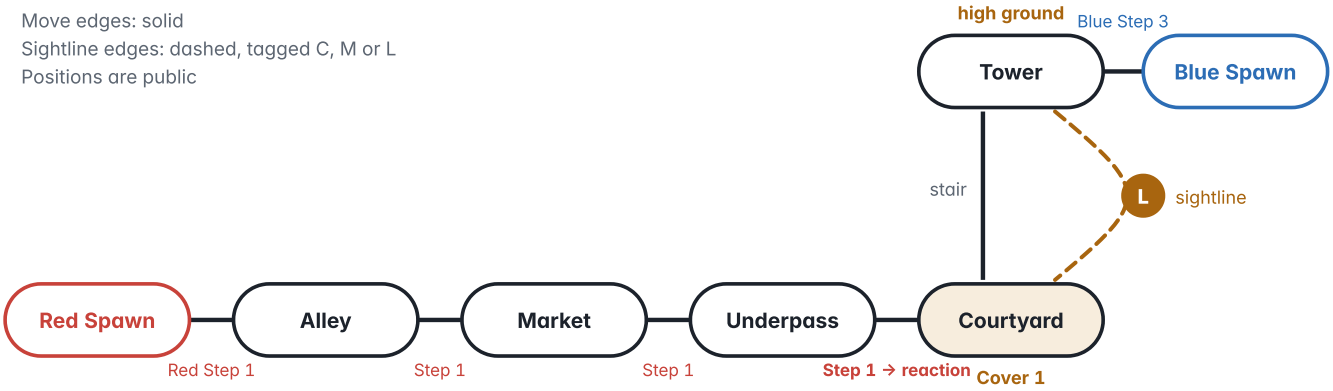

Pitch. An arena 1v1 in two acts. **Draft (3 minutes):** both players snake-draft from three open packs of 4 loadout pieces (weapons, attachments, perks, equipment, streaks). Taking the sniper so your opponent can't is a real strategy. **Fight (6–8 minutes):** a Team Deathmatch to 5 downs on a 7-node map, with **no turns.** Both operators sit on a shared **time track**: whoever is further behind in time acts next, and every action costs ticks. A sniper's aim costs 3 ticks and an SMG's costs 1. That is how real time and time-to-kill are faked: a heavy gun is literally slow. An aimed operator gets a **free reaction shot** when the enemy walks into their line.

Act 1, the draft: three open packs of 4 loadout pieces, snake-drafted by both players. Pack contents shown are generic piece types.

THE MAP

7 nodes (2 spawns, Alley, Market, Courtyard [Cover 1], Tower [high ground], Underpass) joined by move edges. Sightline edges are printed separately and tagged C, M or L. Positions are public.

The 7 nodes, with the moves and the sightline used in the worked example. Other move and sightline edges are map-specific and not given in the source.

LOADOUT → NO DECK; AN ACTION BAR WITH COSTS (IN TICKS)

Everyone has the same actions, priced by the loadout.

Action	SMG	AR	Shotgun	LMG	Sniper
Step (1 node)	1 ▮	2 ▮▮	1 ▮	3 ▮▮▮	3 ▮▮▮
Aim (pick one sightline; you are now "aimed")	1 ▮	1 ▮	1 ▮	2 ▮▮	3 ▮▮▮
Fire (requires Aimed; damage from §2)	1 ▮	2 ▮▮	2 ▮▮	1 ▮	3 ▮▮▮

Swap to pistol costs 1 (Aim 0, Fire 1). Equipment costs 2. Attachments shift costs (Quick Stock: Aim −1; Long Barrel: +1 Long, Aim +1). Perks bend rules (Soft Step: Step −1; Long Breath: staying Aimed has no upkeep). **Reaction:** when an enemy moves into, or along, your aimed sightline, you fire immediately and pay the Fire cost afterwards. Stepping breaks your aim.

HOW THE FIGHT WORKS

1 Lowest time acts	The operator with the **lower time** acts (ties: the one who acted less recently). They take one action and advance their marker by its cost.
2 Reactions	Reactions interrupt at once.
3 Downed	You respawn at your far spawn at **your current time + 6 ticks** (the respawn timer), and your streak resets. Killstreaks come at 2 / 3 / 4 downs without dying (Recon Drone: the enemy's aim lines are shown for 6 ticks; Sentry Turret: a permanent 1-damage reaction shot on one sightline; Mortar Barrage: 3 damage on a node after a 4-tick delay, so it can be dodged).

WIN

The first to 5 downs. A cap of 120 ticks; at the cap the leader wins. **Match: about 10 minutes including the draft.**

META PROGRESSION

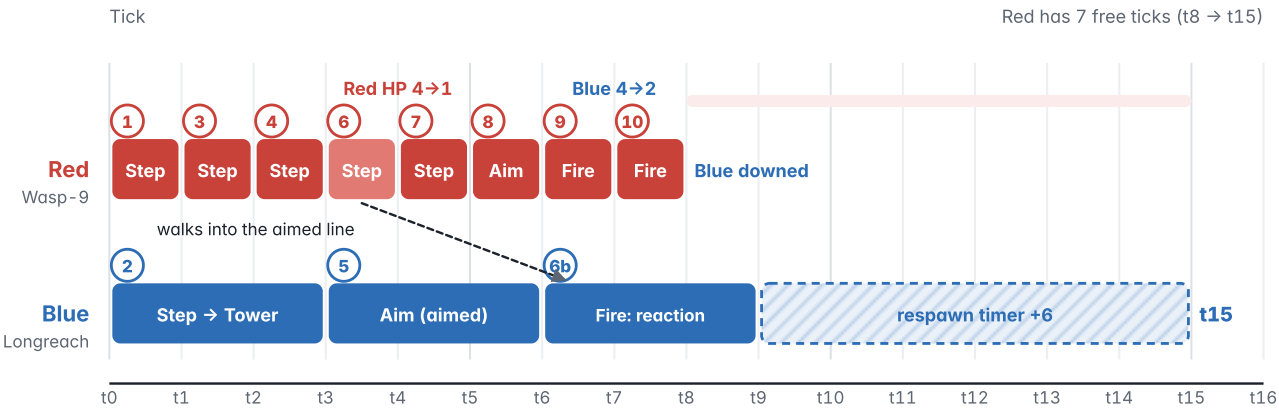

Ranked draft ladders. Your **collection decides the draft pool's cosmetics** (camos and calling cards), never the power. Weekly "pack themes" (e.g. a shotgun week).

PLATFORM FIT

PC and landscape are best, since the time track reads well as a horizontal bar. Phone portrait works: the map on top, a 5-button action bar, the track as a thin strip. The rules are deterministic, so it is great for replays and tournaments.

3-STEP WORKED EXAMPLE

Red Wasp-9 (SMG). Blue Longreach .338 (Sniper). Both start at time 0. A Tower–Courtyard sightline is Long; Courtyard–Tower are also adjacent by a stair (Close when you're in the same node).

The time track. Each block is one action; its width is its tick cost. Numbers show the order of play: whoever is further behind acts next, so after the reaction Red takes four actions in a row.

Step	What happens	Times after
1	Red (t0): Step Spawn→Alley (1), so Red is at t1. Blue (t0): Step Spawn→Tower (3), Blue at t3. Red (t1): Step Alley→Market (1), t2. Red (t2): Step Market→Underpass (1), t3.	Red t3 · Blue t3
2	Blue (t3, tie, Blue acted less recently): Aim along Tower→Courtyard (3), Blue at t6, **aimed.** Red (t3): Step Underpass→Courtyard (1). This walks into Blue's line: **reaction.** The Longreach fires at Long, 4 − 1 cover = **3**, **Red HP 4→1**, and Blue pays Fire 3, so Blue is at **t9**.	Red t4 · Blue t9 **Red HP 1**
3	Red (t4, far behind Blue's t9, so Red acts several times in a row): Step Courtyard→Tower by the stair (1), t5. Aim (1), t6. Fire at Close, 2 damage, **Blue 4→2** (t7). Fire again (1), t8: **Blue downed.** Blue respawns at t9 + 6 = **t15**. Red has 7 free ticks to reposition.	Red t8 · Blue t15 **Blue downed**

The slow, aimed gun won the first exchange; the fast gun won the close one. Time is the ammo.

5
OF 6

SECTION 7 · CONCEPT 5

Sightline

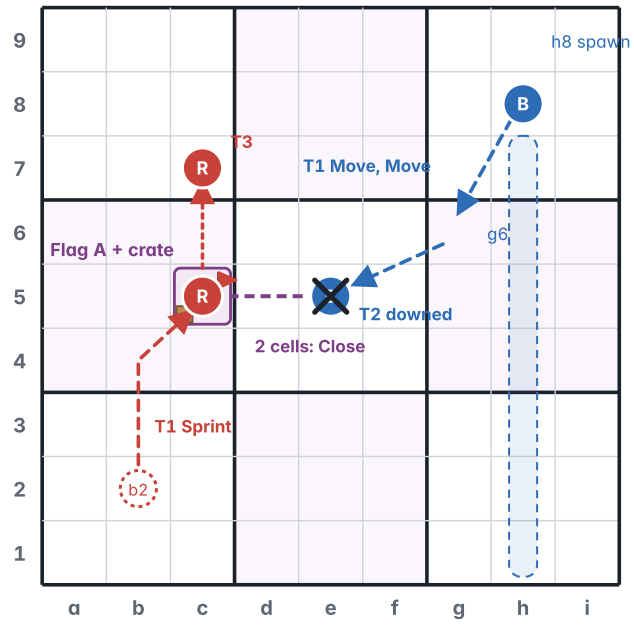

Map-control board game with sightline tiles

PLAYERS	MODE	WIN	MATCH	BEST SCREEN
1v1 or 2v2	Domination, 3 flags	First to 15 points	20–30 min (1v1) · 30–40 (2v2)	PC & tablet landscape

> **Pitch.** The deepest and most "board game" of the six. A 1v1 or 2v2 Domination match on a modular map built from **9 square tiles** (each 3×3 cells) that the players **draft and place before the match**. Each tile has printed walls, cover crates and sightline lanes, so building the map is the first tactic: "I'll give my sniper a long lane to B." Each player has a personal deck plus the loadout board, and earns **in-match XP** from kills and flags to buy attachments and equipment from a shared **Armory** market. That is the "level up during the match" feeling. It is designed so it can also be printed and played on a table (CardZone and Warbuilder lineage).

THE MAP

A 9×9 grid. **LOS** runs only along printed rows, columns and diagonals and is blocked by walls. Range: 1–2 cells = Close, 3–5 = Mid, 6+ = Long. Crates give Cover 1. There are three flags (A, B, C) on the centre tiles.

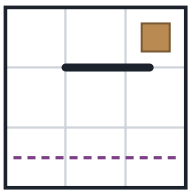

Range, in cells along a line of sight

LOS runs only along printed rows, columns and diagonals and is blocked by walls. Crates give Cover 1. Three flags (A, B, C) on the centre tiles.

Blue Overwatch (turn 2): a reaction shot along the h-file toward flag C (blue band).

One tile = 3×3 cells (illustrative)

thick line: printed wall
brown square: cover crate
dashed: sightline lane

Players draft 9 tiles and place them before the match.

The worked example on the 9×9 grid (columns a–i, rows 1–9; thick lines are tile edges). Tile contents are illustrative; only Flag A at c5 with its crate is placed by the source, so flags B and C are not drawn.

LOADOUT → BOARD PLUS DECK

The loadout board (primary, secondary, 3 perks, field upgrade, 3 killstreak slots) is chosen before the match.

Move ×4 2 cells	
Sprint ×1 4 cells, makes Noise	
Fire ×3	
Frag ×1 · Smoke ×1	

Starter deck of 10. Hand of 5; discard and draw 5 each turn (Dominion-style).

THE ARMORY MARKET: 5 FACE-UP CARDS, REFILLED EACH ROUND

2–5 XP	2 XP	2 XP	1 XP	...
Attachment Goes onto your weapon board and stays	**Extra Fire card** Goes to your discard	**Equipment**	**Overwatch token** A reaction shot on one line	**5th slot** refilled each round

HOW A TURN WORKS (ALTERNATING)

1 Play	Play up to 2 cards from your hand of 5 (Move, Fire, equipment), or place an Overwatch token (a reaction shot on one line).
2 Captures	End your turn on a flag cell with no enemy within 1 cell, and it flips to you.
3 XP & buy	Gain XP (+1 per flag you hold; a kill gives +3) and buy from the Armory.
4 Draw & score	Discard and draw 5 (Dominion-style). After both players have taken a turn, score +1 per flag held.
5 Downed	You respawn at your spawn tile on your next turn with only 1 card play. The streak resets.

WIN

The first to **15 points**. **Match: about 20–30 minutes** (1v1), 30–40 minutes (2v2).

META PROGRESSION

Unlock tiles (new map pieces are the collectible), weapons, attachments for the Armory pool, camos and calling cards. A physical print-and-play edition is possible.

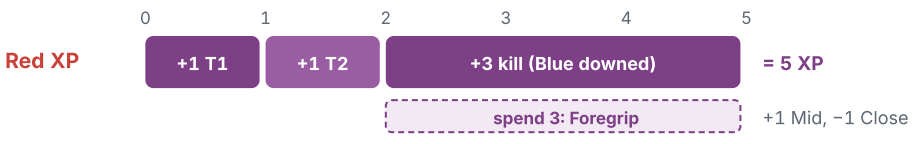

PLATFORM FIT

PC and tablet landscape. A phone is poor: a 9×9 grid with line-of-sight needs space, even with long-press inspect.

3-TURN WORKED EXAMPLE

Red Kestrel AR-7, at b2. Blue Bastion-60 LMG, at h8. Flag A is at c5, behind a crate (Cover 1).

Turn	Who	What happens	State after
Turn 1	Red	Sprint b2→c5 (4 cells), standing on the flag; no enemy within 1, so **A flips to Red.** The Sprint makes Noise, so Blue sees where Red went. Red gets +1 XP.	Red holds A · Red XP 1
	Blue	Move h8→g6, then Move g6→e5. Row 5 LOS from e5 to c5 is 2 cells, **Close**, but Blue has used both card plays on movement, so no shot. End of round: **Red 1–0.**	Score 1–0
Turn 2	Red	Fire at Close, 2 damage (cover doesn't apply at Close), **Blue 4→2**. Then Frag e5: 2 damage, **Blue downed** (+3 XP, so Red has 5 XP). Red buys **Foregrip** (3 XP; +1 Mid, −1 Close) from the Armory.	**Blue downed** Red buys Foregrip
	Blue	Respawns at h8 with 1 play and places an **Overwatch** on the h-file toward flag C.	Overwatch on the h-file
Turn 3	Red	Plays Move c5→c7 to threaten flag B. That doesn't cross Blue's Overwatch file, so there is no shot. **Red holds A** and leads 2–0. Blue's Overwatch now forces Red to approach flag C the long way.	Score 2–0

Red's in-match XP in the example. +1 per flag held in turn 1 and again in turn 2 (step 3 of the turn), +3 for the down: 5 XP, as the source states; then 3 spent on Foregrip.

6
OF 6

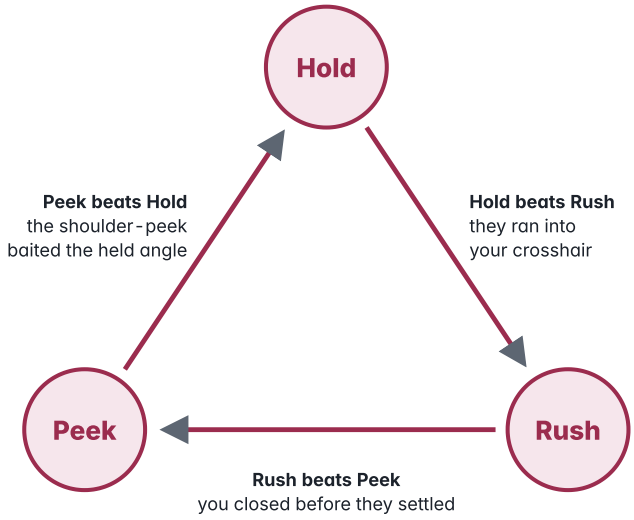

SECTION 8 · CONCEPT 6

Snapshot

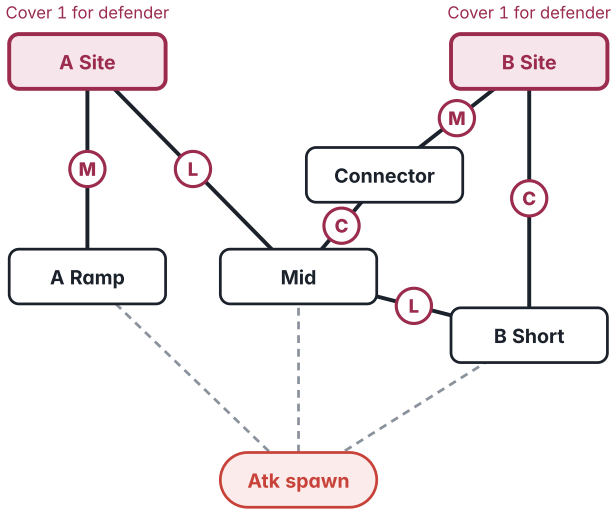

Simultaneous-reveal Search and Destroy duel

PLAYERS	MODE	WIN	MATCH	BEST SCREEN
1v1	Search and Destroy	First to 4 rounds	About 4–6 min	Phone portrait: excellent

Pitch. It looks like a 4-minute party game and has a ladder underneath. Each round is one life: the attacker has to plant at a site, and the defender has to stop them. Each **beat** of the round, both players **secretly** choose a **Position** (where you'll be) and a **Stance** (Hold, Peek, Rush, Utility, or Plant/Defuse), then reveal. If the two positions share a sightline, it's a fight: **Hold beats Rush** (they ran into your crosshair), **Rush beats Peek** (you closed before they settled), **Peek beats Hold** (the shoulder-peek baited the held angle). The winner shoots with their weapon's damage at that range. The same stance means both fire at once, which can trade. With no contact, **nothing is revealed** except Noise from rushing. It is the purest version of "who pre-aimed the angle?"

The stance triangle. Arrows point from winner to loser. Same stance: both fire at once (can trade).

The bomb-site layout. Six positions plus the attacker's spawn. Solid edges are sightlines tagged with their range; sharing a position = Close. Dashed: spawn links.

THE MAP

Six positions in a graph: **A Site, A Ramp, Mid, Connector, B Short, B Site**, plus the attacker's spawn (which links to A Ramp, Mid and B Short). Each sightline edge is tagged with a range: A Ramp–A Site **M**, Mid–A Site **L**, Mid–Connector **C**, Connector–B Site **M**, B Short–B Site **C**, Mid–B Short **L**. Sharing a position = Close. You move one edge per beat (two with Rush). The launch target is 4 maps.

LOADOUT → NO DECK; AN ALWAYS-AVAILABLE HAND

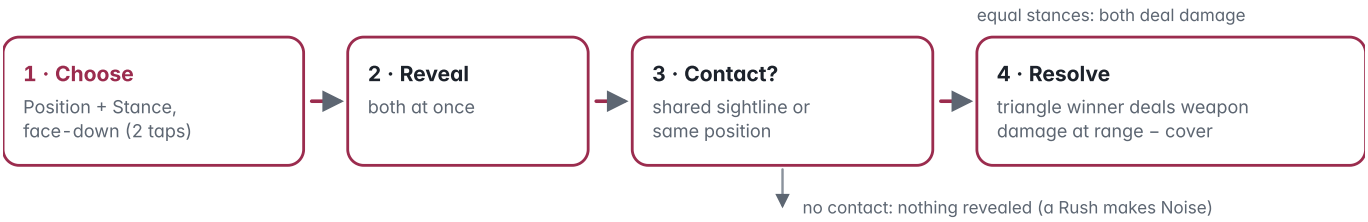

Your hand is the map's position cards plus 5 stance cards, every beat. The loadout adds to them: the weapon sets damage by range; the Secondary gives a 1-damage "Sidearm Peek".

POSITION	POSITION	POSITION	STANCE	STANCE	STANCE	STANCE	STANCE
A Site	Mid	… one per position	Hold beats Rush	Peek beats Hold	Rush beats Peek · move 2 · Noise	Utility e.g. Frag: 2 to an adjacent position	Plant / Defuse

- **Lethal and Tactical**, 1 use per round each. Frag: a Utility stance that deals 2 to a chosen adjacent position. Flashbang: the enemy at a chosen adjacent position has their stance cancelled. Smoke: removes one sightline for 2 beats.
- **Perks:** Soft Step (your Rush makes no Noise), Low Profile (immune to Recon), Thick Plates (HP 5), Scrounger (a kill refills your Lethal).
- **Field Upgrade**, once per half: Deployable Cover (−1 damage taken this beat) or Signal Jammer (no enemy Recon or Noise this round).
- **Killstreaks** run on downs without dying, **across rounds**: Recon Drone (2: before the next beat's choice, the enemy's current position is shown to you), Sentry Turret (3: a position of your choice Holds for 2 damage every beat this round), Mortar Barrage (4: name a position; whoever is there next beat takes 4).

HOW A ROUND WORKS

1 Health	HP 4 (wounds carry over within the round; a fresh 4 each round).
2 Beat (up to 5 per round)	Choose Position + Stance face-down, then reveal. A fight happens if the positions share a sightline or are the same. Resolve the stance triangle; the winner deals weapon damage at that range minus cover (sites have Cover 1 for the defender). Equal stances: both deal damage. No contact: positions stay hidden, and a Rush reveals the rusher's position afterwards (Noise).
3 Plant / Defuse	**Plant:** the attacker uses the Plant stance at a site with no contact that beat. **Defuse:** the defender then has 2 beats to use Defuse at that site with no contact (being hit cancels it).
4 Round end	A down (an elimination), a detonation (the attacker wins), a defuse, or 5 beats with no plant (the defender wins).

One beat, resolved. Two taps per player (a position and a stance), then a simultaneous reveal.

WIN

The first to **4 rounds**, swapping sides after 3. **Match: about 4–6 minutes** (one beat is about 8 seconds).

META PROGRESSION

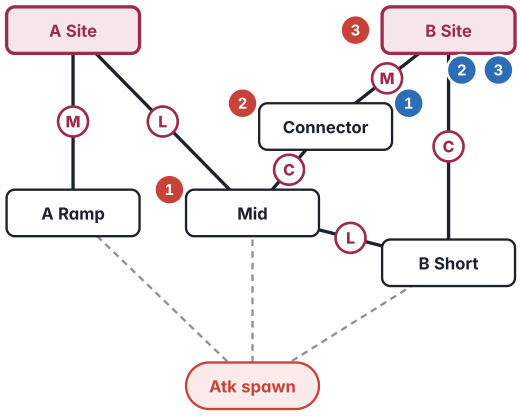

Ranked tiers with seasonal calling cards, weapon XP and camos, map unlocks, and "clutch" challenges (win a round below 2 HP). It shares Point Man's loadout collection if both ship.

PLATFORM FIT

Phone portrait: excellent. The map graph on top, two short card rows (positions and stances) at the bottom, two taps per beat. It works for PC and async ("play a beat a day").

3-BEAT WORKED EXAMPLE (ROUND 1)

Red attacks with a Kestrel AR-7 (C2 / M2 / L1). Blue defends with a Mako-12 shotgun (C4 / M1 / L0) and starts at B Site.

Beat	Red	Blue	Contact	Result
1	Mid + **Peek**	Connector + **Hold**	Close	Peek beats Hold. **Blue 4→2**
2	Connector + **Rush**	B Site + **Hold**	Mid	Hold beats Rush. **Red 4→3**
3	B Site + **Rush**	B Site + **Peek**	Close (same)	Rush beats Peek. **Blue 2→0**

Where each player chose to be, beat by beat (1–3).

- **Beat 1:** Red picks **Mid + Peek**. Blue picks **Connector + Hold**. Mid–Connector is a Close sightline, so there's contact. Peek beats Hold, and Red shoots: Close 2 damage, **Blue HP 4→2**. Both positions are now known.
- **Beat 2:** Blue expects a push and falls back to **B Site + Hold**. Red pushes to **Connector + Rush**. Connector–B Site is Mid. Hold beats Rush, and Blue shoots: shotgun Mid 1, **Red 4→3**. (Had Blue stayed at Connector, Red's Rush would have run into a Close Hold: shotgun 4, a one-shot. Red took a risk and got away with it.)
- **Beat 3:** Red reads that Blue won't leave the site and plays **B Site + Rush**. Blue, burned by Beat 1's Peek, decides to swing out first and plays **B Site + Peek**. A Hold would have won (and one-shot Red at Close). Rush beats Peek, same position, Close 2 damage, **Blue 2→0, eliminated. Red wins Round 1 (1–0)** with streak 1. One more down, without dying, unlocks the **Recon Drone** for Round 2.

SECTION 9

Comparison and recommendation

9.1 Comparison table

1 = low, 5 = high; for Risk, lower is better.

Concept	Structure	Depth	Simplicity	CoD feel	Mobile fit	Novelty	Risk	Match
1. Point Man	1v1, deck = loadout, 3×3 rooms, Hardpoint	4	3	5	4	4	**Med** balancing generated decks	10–12 min
2. Fireteam	3v3, simultaneous plans, lanes, Domination	4	3	4	3 (landscape)	3	**Med** 6-body readability, ally-bot quality	8–10 min
3. Behind the Line	Solo roguelite, deckbuilder, telegraphed enemies	4	4	3	5	2	**Low** proven genre	25–35 min run
4. Tick Rate	Draft, then a time track, TDM	5	2	4	3	5	**High** the time track is hard to read	about 10 min
5. Sightline	Board game, tile-built map, in-match market	5	1	4	1	3	**High** LOS AI, length	20–40 min
6. Snapshot	Simultaneous-reveal S&D duel	2	5	4	5	4	**Med** can feel like coin-flips	4–6 min

9.2 Recommendation: prototype Point Man first and Snapshot second

Point Man is the one that answers the head's brief most directly: *one character, two weapons, perks and stuff, improving our own character, fighting on a map.*

1 · Point Man

- It is the only concept where **the collection loop and the match loop are the same object.** Unlocking an attachment literally rewrites your deck, which makes pillar 7 ("every match moves a bar") felt in the next match, not just seen in a menu. That is the strongest retention hook of the six.
- **Hold Angle** gives cards an honest skill expression in place of aim, and the 3×3 room map is the smallest board that still has sightlines, flanks and power positions. It fits a phone screen in portrait.
- It uses all four CoD loadout layers (weapons, equipment, perks, streaks) without any of them being decorative.
- The risk is balance: every loadout generates a different deck. It is manageable, because the shared weapon table (§2) has only 6 rows and attachments are small trade-offs. A headless sim (KillingCard-style `tests/tools/*_check.gd`) can sweep loadout pairs.

2 · Snapshot, the cheap second

- It can be paper-tested in a day and prototyped in about a week. It isolates the riskiest feel question, "does a card read feel like a gunfight?", at the lowest cost.
- It shares Point Man's weapon table, loadout data and collection, so if Point Man ships, Snapshot becomes its **quick mode** (and a daily ladder), not a separate game.
- Its risk ("it's rock-paper-scissors") is tested directly: if weapon range, map positions and Noise make the reads informed rather than random, the stance triangle works. If playtesters call it a coin-flip, we learn that cheaply.

LONG-TERM SHAPE (NOT FOR THE FIRST PROTOTYPE)

PROTOTYPE 1
Point Man
The flagship: deck = loadout.

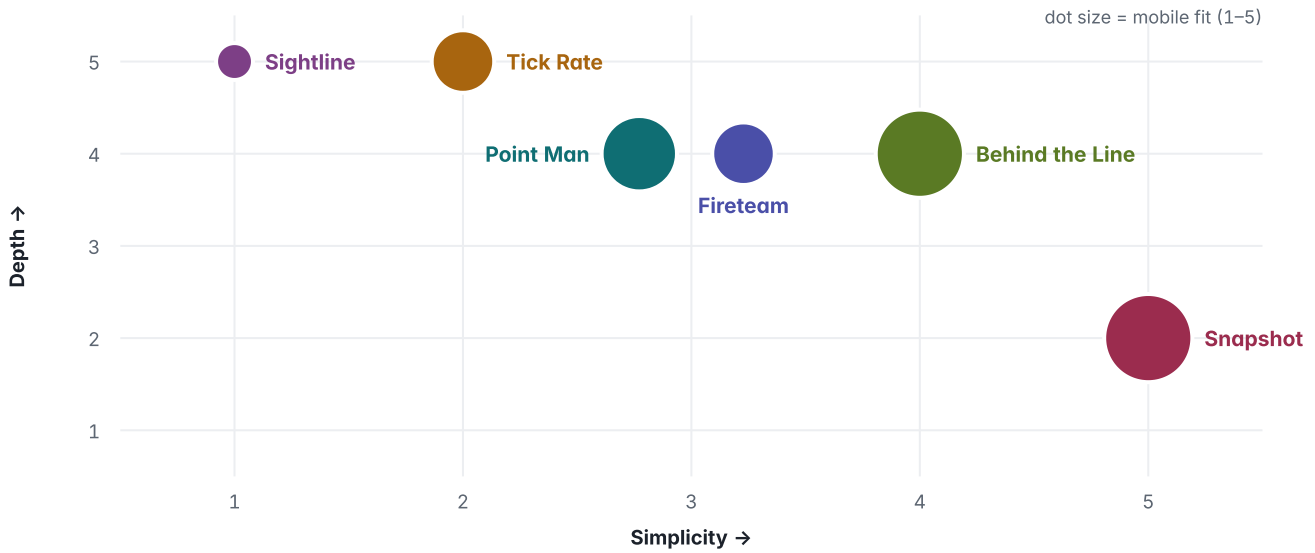

PROTOTYPE 2
Snapshot
Cheap feel test; later Point Man's quick mode and a daily ladder.

LATER
Behind the Line
The natural solo campaign for the same loadout collection, using Point Man's cards against telegraphed AI.

FALLBACK
Fireteam
If the head prefers maximum reuse of KillingCard's lanes.

PARK
Tick Rate
Among the most novel and the riskiest.

PARK
Sightline
Among the most novel and the riskiest.

Simplicity against depth, with mobile fit as dot size. Ratings from the comparison table. Point Man and Fireteam share the same point (3, 4) and are drawn side by side.

SECTION 10

Reuse

From KillingCard (`projects/killingcard/source/project-killingcard/`). Original code and data only; nothing under `assets/licensed/` is touched or referenced.

What	File(s)	Used by
Loadout data model (Primary, Attachment, Perk, Killstreak slots; Handling-like `rotations_per_round` ; attachment pools)	`scripts/data/loadout_item.gd` , `data/loadout/*.tres` (Kestrel AR-7, Wasp-9, Longreach .338, Bastion-60, Grit, Extended Mag, Foregrip, Holo Sight, Recon Drone, Sentry Turret, Mortar Barrage, Attack Helo ...)	All. Re-add the Secondary, Lethal and Tactical slots that `kc-loadout-cut` removed (the enum and validation already existed).
Streak meter, streak tray, reset on down	`scripts/rules/streak_tracker.gd`	All
Score-to-target, round cap, overtime, draw	`scripts/rules/mode_rules.gd` (Zone Control is close to Domination; add Hardpoint and S&D rows)	1, 2, 4, 6
Match state + hooks pattern, deterministic seeds, clone for AI search	`match_state.gd` , `match_hooks.gd` , `match_clone.gd`	1, 2, 4

What	File(s)	Used by
Beat-ordered firefights, First Shot, Initiative	`scripts/rules/firefight_resolver.gd`, `firefight-order.md`	2 (direct), 1 (Hold Angle ordering)
Fair AI by construction (AiView), greedy planner with personalities	`scripts/ai/ai_view.gd`, `ai_planner.gd`, `ai_personality.gd`	1, 2 (bots), 3 (intent-based is simpler)
Run map, shop, events, modifiers, save	`scripts/run/*` and `run-v2.md` (bosses with one rule, Operators with passive + ability)	3
Inspect on right-click / long-press, gesture	`scripts/ui/card_inspector.gd`, `press_gesture.gd`, `card_info.gd`	All (studio UX rule)
Banner card frame and calling cards as profile banners	`banner_card.gd`, `banner_view.gd`, the original banner art pipeline	Meta (calling-card rewards)
Feedback FX: kill feed, hit markers, tracers, streak arc, call-in takeover, float text, synth SFX	`scripts/fx/*`	All
Minimap, score bar, match intro/end banners	`minimap.gd`, `score_bar.gd`, `match_intro.gd`, `match_end_banner.gd`	1, 2, 4, 6

"Used by" numbers are concept numbers: 1 Point Man, 2 Fireteam, 3 Behind the Line, 4 Tick Rate, 5 Sightline, 6 Snapshot.

STUDIO PRIOR ART

- **Killstreak** (`projects/killstreak/documentation/design/core-rules.md`): the original "the loadout is your Operator" ruleset. Its perk and streak rulings (equipment kills count for the streak, killstreak kills don't) carry over as written.
- **KillingCard Run v2:** the run map structure, bosses and Operators for Behind the Line.
- **DeadDraw:** the solo card-crawl rhythm (deal, resolve, carry forward) is a fallback encounter format for Behind the Line.
- **CardZone / Warbuilder:** deckbuilder market and print-and-play constraints for Sightline. Warbuilder's location-by-location loot is a possible Behind the Line event type.
- **CallingCard** and **Calling Card Tiles** (`studio/concepts/calling-card-tiles/`): making calling cards worth collecting. Here they are earned feat banners shown on the match intro, which is the same value proposition.

SECTION 11

Questions for the studio head

Four decisions. The designer's recommended option is highlighted in each.

Q1 Which concept(s) should we prototype?

- A — Point Man only.
- **B — Point Man, plus Snapshot** as a cheap feel test that later becomes Point Man's quick mode. **RECOMMENDED**
- C — Fireteam: the most KillingCard code reuse; closest to the current lane board.
- D — Behind the Line: PvE first, the lowest risk and the strongest single-player meta.

Q2 Who is the opponent in the first prototype?

- **A — AI only** (KillingCard-style fair AI with personalities). Fastest to test, no netcode. **RECOMMENDED**
- B — Local hot-seat, two humans on one device.
- C — Async online PvP (turn-based duel by link).

Q3 How much is hidden on the map? This sets how much "fog of war" the CoD feel has.

- **A — Open positions with hidden reactions** (Hold Angles face-down; recon reveals them). For Point Man: readable on a phone, and the bluff lives in the Hold. **RECOMMENDED**
- B — Fully hidden positions with Noise from sprinting and firing (Snapshot-style everywhere; more tension, harder to read).
- C — Hybrid: positions are public only while in an enemy's sightline.

Q4 Which screen do we design first?

- **A — Phone portrait first** (map on the top half, hand on the bottom), scaling up to PC. Both recommended concepts were sized for it. **RECOMMENDED**
- B — PC / landscape first, phone later.
- C — Both from day one (costlier UI work).
